Biodiversity & Natural Resource Monitoring Log

Organic production must integrate cultural, biological and mechanical practices that foster cycling of resources, promote ecological balance and conserve natural resources. Certified organic operations must select, carry out and record production practices that "maintain or improve the natural resources of the operation," (NOP §205.200). This form can be used to record observations made on a daily, weekly, monthly or annual basis to monitor the effectiveness of the Biodiversity Conservation & Natural Resource Management plan outlined in OSP form G4.2.

Operation Name: _____ **Client ID:** _____

Date	Location / Parcel ID	Observations (May include but are not limited to soil composition, soil stability, water quantity, water quality, native or invasive species, pollinators, wildlife habitat availability, etc.)	Benefits
